

RAJENDER

Hyderabad, India 500081 | +91 - 8309610336 | rajenderraapelli93@gmail.com

Summary

Having 5.3 years of industry experience in UI development and also involved backend, specializing in enterprise applications with a focus on usability and performance. Strong expertise in ReactJS and Redux (4.3 years relevant), Redux Toolkit, and micro frontend architecture. Proficient in HTML, CSS, Bootstrap, SASS, TypeScript, JavaScript, Tailwind CSS, and building reusable UI components. Skilled in GraphQL, Node.js, and MongoDB. Hands-on experience with Git, GitHub, JIRA, and agile methodologies (Scrum). Experienced in AWS, S3, and CI/CD pipelines for deployment. Familiar with AJAX, JSON, and various development tools like VS Code, Edit Plus, and Sublime Text.

Experience

Software Development Engineer Infosys - Hyderabad, India	May 2024 to Feb 2025
Software Engineer Appszone technologies Pvt Ltd - Chennai, India	Nov 2019 to Apr 2024

Skills

- Responsive Web Design
- Micro Frontend
- ReactJS
- React Query
- Redux & Redux Tool Kit
- AWS
- S3
- CI/CD Pipelines
- GraphQL
- JavaScript
- TypeScript
- CSS3
- HTML5
- Bootstrap
- TailwindCSS
- JEST
- React-Testing-Library
- WordPress
- SASS
- Adobe Analytical skills
- Material - UI
- Accessibility(ARIA)
- Code Deployment

Education

Bachelor of Technology, Electrical and Electronics Engineering Jawaharlal Nehru Technological University - Hyderabad, TG	2015
---	------

Projects

Telecommunications Services Application | Verizon | May - 2024 to Feb - 2025

Verizon Application is a comprehensive, user-friendly web application built using React.js. The app is designed to provide users with a seamless experience for managing their Verizon account, services, and subscriptions. It incorporates responsive web design principles, ensuring accessibility across various devices while delivering an exceptional user interface and user experience. The project also integrates GraphQL for efficient data fetching, React Query for optimized state and server data management, and accessibility features to enhance usability for all users.

Responsibilities:

- Worked on this Verizon Telecom using React.js, Redux Toolkit, React Query, GraphQL, Bootstrap, TailwindCSS, ES6/Babel, Webpack, and UI/UX principles to enhance user experience.

- Built responsive and accessible web pages using HTML5, CSS3, JavaScript, TypeScript, React.js, and Tailwind CSS, ensuring compatibility across all browsers and devices, including mobile screens and tablets.
- Optimizing performance and state management for handling large data efficiently.
- Integrated GraphQL for efficient data fetching, reducing API over-fetching, and improving application responsiveness.
- Used React Query for optimized server-state management, caching, and background data synchronization to enhance performance.
- Implemented Redux Toolkit to manage application state and streamline asynchronous operations.
- Developed and styled reusable React components using Styled Components and Flexbox, ensuring a consistent UI design.
- Utilized Axios with React.js to make efficient API calls, improving data retrieval speed and reliability.
- Worked with React Virtual DOM for efficient rendering and optimized UI updates.
- Extracted reusable logic from components using Higher-Order Components (HOCs), such as infinite scroll for dynamic content loading.
- Ensured web accessibility by implementing ARIA (Accessible Rich Internet Applications) attributes, making the application more inclusive for users with disabilities.
- Conducted unit testing on React.js applications using Jest, and React Testing Library to ensure code reliability and maintainability.
- Integrated AWS S3 with CI / CD pipelines for seamless deployment, ensuring automated and efficient application updates.
- Collaborated with cross-functional teams, including designers, backend developers, and DevOps engineers, to define release strategies and implement continuous integration and delivery (CI / CD) processes

E-Commerce Application | VLCC | Nov - 2022 to Apr - 2024.

This project aims to create a robust online platform for selling products across various categories. The platform will include features such as user authentication, product browsing, searching, filtering, adding items to the cart, checkout, and payment processing. We'll be utilizing ReactJS for building the user interface and Redux for managing application state.

Responsibilities:

- Worked and maintained a React.js-based VLCC E-commerce platform, implementing Redux Toolkit for state management and React Query for efficient API interactions, enhancing product discovery and user engagement.
- Designed and built interactive, mobile-friendly, and accessible UI components using Tailwind CSS, Bootstrap, and Styled Components, ensuring a seamless shopping experience across devices.
- Implemented GraphQL APIs for optimized data fetching, reducing payload size and enhancing application speed by retrieving only necessary product details, offers, and user preferences.
- Integrated real-time updates for product availability, order tracking, and promotions using React Query's caching and synchronization features to ensure up-to-date information for customers.
- Developed personalized product recommendation features using React.js and Redux Toolkit, improving customer experience through AI-driven suggestions and dynamic filters.
- Optimized performance with React Virtual DOM and lazy loading, reducing load times and ensuring smooth interactions while browsing beauty and wellness products.
- Built reusable, modular, and theme-based UI components following VLCC's branding guidelines, ensuring consistency across different sections of the application, including product listings, user profiles, and checkout pages.

- Ensured seamless checkout and payment processing by integrating secure payment gateways, reducing drop-offs, and improving conversion rates.
- Utilized AWS S3 for storing product images, customer-generated content, and order invoices, while implementing CI/CD pipelines for automated deployment and application updates.
- Implemented robust authentication and user session management using jwt, enhancing security with token-based authentication, session storage, and multi-factor authentication (MFA) where necessary.
- Enhanced web accessibility and usability by integrating ARIA attributes and making the platform inclusive for all users.
- Conducted performance optimization by implementing Webpack bundling techniques, code splitting, and lazy loading to minimize initial page load times.
- Regularly writing unit test cases, and debugging using Jest and React Testing Library to maintain application stability and reliability.
- Worked closely with UI/UX designers and DevOps teams to align application updates with business goals, ensuring rapid iterations and feature rollouts.

Insurance Portal | Star Health | Nov - 2019 to Oct - 2022.

Star Health Insurance Portal is a web-based application designed to simplify health insurance policy management for customers. The platform enables users to browse health plans, purchase policies, manage claims, and track their coverage history. The system ensures a seamless and accessible user experience, integrating ARIA standards for enhanced accessibility and responsive design for compatibility across devices. The application leverages React.js, Redux, Bootstrap, Material-UI, and TailwindCSS to deliver a dynamic and user-friendly interface, ensuring optimal performance and compliance with WCAG accessibility standards.

Responsibilities:

- Developed and maintained reusable, responsive UI components using React.js, Bootstrap, Material-UI, and TailwindCSS, ensuring a seamless user experience across devices.
- Integrated ARIA (Accessible Rich Internet Applications) guidelines to enhance accessibility, ensuring compliance with WCAG standards for users with disabilities.
- Designed and implemented Redux-based state management, optimizing API data handling and ensuring state persistence for a consistent user experience.
- Utilized Redux middleware (Thunk / Saga) to manage asynchronous operations like API calls efficiently.
- Consumed RESTful APIs for seamless communication between the frontend and backend, leveraging JSON for optimized data transmission.
- Collaborated with backend teams to integrate Node.js APIs, ensuring smooth data flow and application performance.
- Implemented unit and integration tests using Jest and React Testing Library, enhancing code reliability and preventing regressions.
- Applied TypeScript for improved type safety and maintainable code structure, enhancing productivity and reducing runtime errors.
- Followed responsive web design principles, ensuring smooth usability on mobile, tablet, and desktop devices.
- Enforced accessibility features, including keyboard navigation, screen reader support, and clear error messaging for improved user interaction.
- Managed code versioning using Git and collaborated via GitHub for maintaining a structured and clean codebase.
- Integrated CI/CD pipelines to automate testing and streamline deployment processes, ensuring efficient and secure releases.
